With this outstanding software, you will be able to create, edit and represent business processes in a step-by-step manner using UML, ERD, Overview and Chart diagrams. During workflow modeling, you will be able to export your work to XML format, so you can use it in other tools and make changes to the structure of the diagram. To make it easier for you to create and manage your business processes, this software enables you to use and manage stereotypes, create your own or use provided ones. You will be able to configure default value definitions, tag values, as well as chart relations and constraints. You will also be able to identify glossary items you use in your diagram, add and reuse them in other diagrams. In addition to that, each time you are modeling your own diagrams, you might want to record the vocabulary you use in your model so other users can understand each created diagram. By accessing the Modeling menu, you will be able to configure the stereotypes by changing the scrope to Workflow or Project and change the constraints, tagged value definitions and chart relations for each model element, manage business rule keywords and viewpoints, as well as configure default tagged values. By selecting the glossary items in the glossary grid in the main toolbar, you will be able to create tasks in the pools and connect them with proper flows. By accessing the 'Teamwork' feature, you will be able to share projects and diagrams with your colleagues, add versions in background and save it, so your team can review and even roll back to a previous version if wrong modifications were performed.
