ActiveSync Tester Crack+ [2022]

ActiveSync Tester is a handy diagnostic tool that can identify connectivity issues and DNS-related problems in Exchange Server, displaying detailed reports containing conclusions and suggested solutions to solve the detected problems. What this application actually does is simulate a Exchange ActiveSync client, in order to set up a new connection and identify any problem that might occur along the way. This way, you can make sure that ActiveSync is correctly configured and that your clients will not face connection failures. Available for both Windows and iPhones, ActiveSync Tester addresses issues related to domain name servers, digital certificates, security and user permissions, server or ActiveSync configurations and so on. It supports both inside (within the LAN) and outside firewall clients. It can run tests to identify SSL support and can assist you in finding solutions to connection problems. The generated reports are not transmitted to AccessMyLan or any other application, so your data is secure. Thanks to the intuitive interface, it is very easy to work with. You just have to select the client's location, enter the name or the IP address of the Exchange Server and configure a set of options that instructs the application on the tests to run. ActiveSync Tester performs DNS lookup and tests the TCP connection, enabling you to monitor its progress meanwhile. The generated diagnostics reports contains details that can help you identify the cause of the problem and resolve the issue without a lot of hassle. ActiveSync Tester is a great tool for those who use Exchange Server, enabling them to find the cause of connection failures. EXCHANGE TESTING SOFTWARE The number one challenge of exchanging email in an organization is that many mailboxes are disconnected from the corporate network. This means that unless the user connects to the corporate network, they are not able to connect to email. The challenge for this problem is that many organizations have separate or dual networks that are separate from the Exchange environment.

SEMI-SUPPORTED DEVICES Most hardware that is currently connected to a network either works in an Exchange environment or is badly supported. In order to solve this problem, CanFI offers a number of solutions that meet the needs of

Applicable Domains Verified Purchase Very handy tool for testing all the various settings available in ActiveSync. it lets me fine tune Exchange server in a very quick and easy manner. no need to fiddle with win all files :) 1 person has found this review useful Was this helpful? It's not ActiveSync Tester Posted by dgdgn on 25th Dec 2012 I have used this application for years. As far as I can remember it was always very handy and reliable. In the past years the development team have abandoned the tool and as a result it does not work properly now. It asks you to change the port number but it still tries to connect to the old port number. That means it does not support the new SSL/TLS or it does not detect the new SSL cipher suites when you use the new SSL ciphers. Not my fault of course. It tries to
