Update, Feb 9, 2020: Adobe released an update to Photoshop Elements 12. In that update, Adobe made some minor changes that are not mentioned in this article but that will be covered in the notes below. Photoshop Elements is an image editor and a graphics tool that lets you edit, create and print photographs. It is a free version of Photoshop. Photoshop Elements has a full version of Photoshop features. Elements supports all the editing operations: basic editing tools, adjustments, filters, color correction, tracing and other tools. This software is an alternative to Photoshop for those who want to edit digital images and do some graphic design for their personal use or to create images for their websites. In this article, we'll teach you how to create professional-quality photoshoots quickly with this photo editor. We will also tell you how to use several tools and workflows to take better photos and improve the quality of your images. Not all features are available in this free version. Some tools have different features in the free version depending on the version. Check your version before downloading. Photoshop Elements 13 features Adobe Photoshop Elements 13 includes a lot of the Photoshop features. It has new features that many users didn't know before. Some features haven't changed but they are not mentioned here. Masks New for Photoshop Elements 13, you can create masks to adjust elements, changing only the part you want to edit. Instead of cutting and pasting, you can simply paint the changes you want in the image. Deep filters Another feature of Photoshop Elements 13 is the DFX filter. This is an automatic filter that creates the effects of film photography and beyond. You can create or improve the effects in a filter layer. Stacking Photoshop Elements 13 improves the ability to stack images. If you are using different layers, they are automatically stacked. Stacking is like a photo montage. You can add up to 20 layers and create combined effects. Adjusting the color channels In Photoshop, you can only set the RGB channels. In Photoshop Elements 13, you can also adjust the LAB channels. These are a new feature of Photoshop and are used by Adobe's Photoshop Colorista and Adobe Stock. Adjusting opacity and colors In Photoshop Elements 13, you can control the opacity of layers. You can also adjust the colors of images and layers a681f4349e

Q: How to check if MongoDB user collection is empty? I'm trying to write a check that will allow me to start the app only when the collection user is empty. I have tried this (fails with an error): Error: Empty collection found, create a new one Attempted solution: if (! Collection.find().count() > 0) { throw new RuntimeException("Empty collection found, create a new one"); } Attempted Solution: if (! Collection.count() > 0) { throw new RuntimeException("Empty collection found, create a new one"); } Attempted Solution: if (! Collection.count() == 0) { throw new RuntimeException("Empty collection found, create a new one"); } A: I am also surprised there is no built-in method in Collection for this. Instead of checking for empty collection, why don't you just check for non-empty collection in the first place? if (! Collection.find().count() > 0) { throw new RuntimeException("Empty collection found, create a new one"); } package org.owasp.html; import org.openqa.selenium.WebElement; public class GherkinElement extends Element { @Override public boolean isPresent() { return ((WebElement) getDriver()).isElementPresent(this.getTagNamet()); } @Override public String getText() { return ((WebElement) getDriver()).getText(((GherkinElement) this).getTagName()); } @Override public WebElement getWidget() { return ((GherkinElement) getDriver()).getElement(((GherkinElement) this).getTagName()); } public GherkinElement(WebElement element) { super(element.getTagName()); this.element = element; this.getDriver().assertTrue(element.isElementPresent(this.getTagName()), "Element should be present on gherkin

Alcohol intoxication and the risk of death following midshaft clavicular fractures: a population-based cohort study. The objective of this study was to determine whether alcohol intoxication was associated with an increase in the risk of death following midshaft clavicular fractures, using a large population-based database. Between 2000 and 2008, surgical fixation of a midshaft clavicular fracture was performed in 13,102 patients in Sweden and 1,894 patients in Switzerland. Of these, we identified 1814 patients (13%) who presented with alcohol intoxication at the time of admission. A total of 281 patients died within 1 year of fracture in Sweden and 281 in Switzerland (all-cause mortality). After adjusting for age, sex, and concomitant comorbidities, alcohol intoxication was associated with increased all-cause mortality at 1 year (adjusted odds ratio (AOR) 1.49, 95% CI 1.29-1.72) in Switzerland and at 3 years (AOR 1.45, 95% CI 1.12-1.89) in Sweden. However, excess alcohol consumption was not associated with death (AOR 0.98, 95% CI 0.94-1.01) at any time point in either country. Prehospital and inpatient deaths were also increased (AOR 1.44, 95% CI 1.05-1.97 and AOR 1.60, 95% CI 1.08-2.38, respectively). The risk of death at 3 years was increased in alcohol-intoxicated patients who had a clavicular plate after the index fracture in both Sweden (AOR 1.93, 95% CI 1.18-3.19) and Switzerland (AOR 1.83, 95% CI 1.02-3.27), whereas no effect was observed after using rigid internal fixation (AOR 0.88, 95% CI 0.52-1.49) or no fixation (AOR 0.99, 95% CI 0.74-1.31) in either country. The results of this large population-based analysis of patients with midshaft clavicular fractures were in agreement with previous reports in the literature that alcohol intoxication increased the risk of death, although this effect was not sustained at 3 years in the present study. When patients with midshaft clavicular fractures are intoxicated, injury severity is a major determinant of long-term prognosis. Patients with greater injury severity, including older age
