The original AutoCAD was very expensive and required a 300MHz PC with a hard drive the size of a suitcase. AutoCAD was not compatible with PCs in the 1990s. AutoCAD has evolved over the years and AutoCAD LT (or AutoCAD 2002) was released in 1999. Since then, the AutoCAD platform has undergone significant change as Autodesk developed other applications and software platforms for its AutoCAD products. Today, AutoCAD LT is not recommended for commercial use and is supported only for compatibility with AutoCAD 2002. AutoCAD 2009 was released in 2006, AutoCAD 2010 was released in 2009, AutoCAD LT 2010 and AutoCAD 2012 were released in 2010, and AutoCAD 2013 was released in 2011. The most recent version of AutoCAD is AutoCAD 2017 (or AutoCAD R16 in AutoCAD 2017). AutoCAD 2017 is a widely used advanced features and 3D modeling CAD application for Windows, Macintosh and Linux computers. AutoCAD 2017 includes the following new features: AutoCAD 2017 is a fully 64-bit, multi-platform, multi-threaded, multi-user application that includes a rich set of tools and technologies that make it easier to create and manage three-dimensional designs. AutoCAD 2017 includes the following new features: 3D Drafting Model from scratch, or using components Create views, animations, lighting, shadows, materials 3D mesh surfaces Create section planes, section cutouts, sloping surfaces, and more Grow your 3D scene using construction objects and viewports View complex designs as projected 2D images, or in 3D space Perspective tools for drawing, editing, and presenting your designs New arc and polar tools to help you draw perfect circles and arcs Advanced image processing and editing Create and edit objects with any combination of geometric, textured, and solid models Create and edit applications to help you use AutoCAD Import and export to other AutoCAD software Introducing AutoCAD 2017 A 3D CAD application that makes it easy to create, model, and edit 3D designs. AutoCAD is also available on Mobile devices with AutoCAD Mobile apps or AutoCAD Web apps that work on Windows and Mac computers or with smartphones and tablets.

Graphics In Graphics' official guidebook, Autodesk states that its purpose is "to enable you to turn basic geometric shapes, text, or line art on a flat screen into stunning, dynamic, computer-animated 3D models." It may be used in designing 3D models. The same guidebook also describes a software bundle that includes numerous 3D-modeling software. The company also offers a class of software called A360. It is similar to Autodesk's product line MotionBuilder, which uses a technique known as "raster to vector" for converting raster images into vector graphics. Autodesk Realtime Streaming Technologies allows designers to bring their work to life on the web. AutoCAD 2013 was one of the first applications to have internet-enabled web services. AutoCAD is a part of the AutoCAD 2013 web services, which also includes other applications like AutoCAD Rasters and Blueprints, which can be used as a web service. Web services can be used for Autodesk content delivery and web conferencing with AutoCAD. Raster to vector conversion AutoCAD Rasters can convert one of the following files to vector: AutoCAD rasters BMP JPEG PNG TIFF It can use another application to convert the raster image to vector and can then import the raster to AutoCAD Rasters. The software creates a different layer for the raster than for the vector so that the raster layer can be used for making changes and editing. AutoCAD Layers AutoCAD Layers is a product that allows for the conversion of image files into vectors. Once a user converts a layer, they can then turn that image layer into an AutoCAD drawing file. This product is only available on the web and costs \$25 per year to use. A360 A360 is a digital workflow tool to design, construct, and deliver in 3D. It has many of the same features as A360+, which is a desktop product. The capabilities of A360 includes: 3D design from 2D sketch; advanced and structured parametric modeling; building assemblies; document reviews, animations and visualizations. The product is integrated with AutoCAD, and can be used on both PC and Mac. 3D content creation AutoCAD can create 3D models, including 3D models 5b5f913d15

Install the Microsoft® .NET Framework 3.5 Service Pack 1 for Windows® XP SP3. The SDK is developed with the .NET Framework 3.5. Open the Autodesk® Autocad 2008 SDK Visual Studio project. Copy the folder that contains the autocad.dll and cll.dll from your installation folder and paste it in the Debug/x86/ folder of your project. Create an empty project in the solution and choose the Autocad2008.dll and Autocad.dll references. If the references are already in your project, leave it as it is. Open the solution. Click on Project/Add New Item/Application/C++ Component/Autocad Control. Name the project and the class. The name must start with a letter, must have a maximum of eight characters and may contain letters, numbers and underscores. Enter the base class name. If it is a wrapper class, add the prefix _ and the suffix.i.e. _GpControl. If it is a new control, enter GpControl. Select the resource editor from the options of the Add New Item dialog box. Add a property with the GetPostMessage() function. You can call GetPostMessage() in a class if you want to interact with another control. Add a property with the PostMessage() function. PostMessage() calls PostMessage() of the control you have selected, in this case GpControl, that we just created. Click on the Properties button in the designer. Select the window style from the list of available styles. It will be inserted in the property grid that you see in the designer. Add a property with the StandardAction that you want to call when the user press the window style menu. The property name should be Preselect. The function must be in the class, in this case GpControl. Add a property with the bitmap size to set the application icon that will be displayed in the window. The property name is bitmap_size. You can add the GetPostMessage() function to get the size of the icon, that is the size of the window. Add a property with the font name to set the font that will be used. The last property is to add the X and Y coordinates of the center of the icon. If the control has the property AutoCenter, the coordinates of the center will be calculated automatically. Check the option AutoSize and set the size
