Revit 2020.5: New feature that allows the automatic import of 3D point cloud data: AutoCAD has been working for years to bring CAD features to Revit. With this release, we are pleased to see the release of a new feature that makes it even easier for you to import 3D data into your architectural design. The new feature is now supported by AutoCAD, and will be available to Revit soon. You can find more information on 3D data in AutoCAD at Image annotations: New AutoCAD image annotations can be created in a variety of ways: By pasting image in Windows Ink panel By associating specific colors and marks to images in Windows Ink panel By importing pictures or editing existing pictures in Windows Paint or other photo editor By importing image from a clipboard or from a file in Windows Explorer The AutoCAD image annotations are now movable and resizable. Document Classification: AutoCAD is now capable of detecting and tagging certain words, objects, and other text as meaningful for your professional task. Shrinklines: AutoCAD now supports the new "shrink" context menu command in 3D viewports. This command allows you to reduce the size of a block or an object to bring it closer to the viewport edge, thereby exposing more of the drawing that may be obscured by the block or object. Schematic content: AutoCAD is now capable of recognizing and importing standard schematic symbols. You can use these symbols in 2D views, and group them in various ways. Python Scripting: The Python support added to AutoCAD in 2019.5 has been enhanced. AutoCAD now understands each and every import statement, and can detect the difference between an import from a path and from a file (e.g., import from path) and that from
