Digital video devices implement video coding techniques, such as those described in the standards defined by MPEG-2, MPEG-4, ITU-T H.263, ITU-T H.264/MPEG-4, Part 10, Advanced Video Coding (AVC), the High Efficiency Video Coding (HEVC) standard presently under development, and extensions of such standards. The video devices may transmit, receive, encode, decode, and/or store digital video information more efficiently by implementing such video coding techniques. Video coding techniques include spatial (intra-picture) prediction and/or temporal (inter-picture) prediction to reduce or remove redundancy inherent in video sequences. For block-based video coding, a video

The truth is, the Colorado River could not be dammed and diverted without the dams that were built first. The Colorado River was created when an ancient mountain range in the southwestern United States was pushed forward over 100 million years. Over the course of millions of years, erosion slowly carved deep canyons, called river basins
