Solve up to 10000 different captcha types including javascript, image, font, color and sound types! Captcha Converter features in GSA Captcha Breaker. It converts any captcha to a viewable image or audio file for you and, additionally, it converts them to JPG, PNG, GIF, BMP and PDF formats. There are several types of captchas. They have different levels of difficulty and one can distinguish them by the content. Javascript Captcha Javascript captchas are among the most popular captcha challenges. One web site requires that you type in the requested sequence of numbers. If you are not able to do that, the site will think that you are a robot and will not let you in. Javascript can be pretty tough. Some sites use such complex algorithms that robots can not handle it even if they have dozens of pieces of software to assist them. A good rule of thumb is that you need to have no less than 5 lines of code in order to be able to use these types of challenges. This might give you some room to spare. Image Captchas Image captchas are a very popular challenge for human beings and even a good number of robots. Some sites want to know the picture you type in and other want you to solve an equation. This is relatively easy and you can be sure that anyone who can use Microsoft Paint and some common sense can use this type of challenge. The biggest problem with image captchas is that they are extremely small. Most of the time, you have to solve them with an image recognition software. That software can take a long time to learn the image and identify it, so it is highly unlikely that you will be able to solve it. E-Mail Captchas E-mail captchas often use a range of characters and letters from the alphabet and require that you type in the required sequence. The difficulty depends on the site and what you are required to do. The most common letters are 'o', 'a', 'l', 'n' and 's'. Each letter is five characters long. If the captcha looks like this, there is probably a range of letters and numbers needed to be used to solve it. A good captcha program should be able to tell when you have typed all the letters and numbers correctly. If you have still not solved it, there is a good chance that you have not typed all the

GSA Captcha Breaker

GSA Captcha Breaker is a product developed by a team of programmers and internet users who wanted a fast and effective online service that allows you to solve captchas (Completely Automated Public Turing test to tell Computers and Humans Apart) and reverse image search at once. In short, GSA Captcha Breaker is a simple, light-weight, but very helpful application which enables you to decrypt captchas at your own pace, i.e. just when you feel like solving one. GSA Captcha Breaker offers two features to solve captchas: Solve captchas : you type in the encrypted captcha and the decryptor instantly reveals the original image and allows you to submit it to the image search engine. Reverse Image Search : you upload the image and the application searches the world-wide web for that image and reveals the original image within seconds. This is not a perfect software in its category as it does not provide 100% success rate, but then, there is no such application that can solve all the captchas at once, no matter their contents. Also, you have to admit that this simple software does the job at your own pace, so this is an excellent alternative to captcha-removal services or to all the laborious captcha decryption methods. Still, if you feel like trying this simple solution, then this is not a wrong choice. GSA Captcha Breaker is available for the Microsoft Windows platform. It requires a minimal amount of system resources and it does not slow down the computer.
