Recover the usernames, passwords and other data from pidgin (Pidgin is a multi-protocol instant messenger). Recover the passwords from pidgin's configuration file (~/.purple/config). Recover (not only) usernames and passwords from MSN (MSN is an instant messenger). Recover the stored passwords from Windows Live Mail. Recover the stored passwords from any other application that can be run in Portable mode. This... Can you help me with Pidgin Password Decryptor for GTA San Andreas and GTA V please? The reason is I want to crack the passwords that I found on a online game that is run in Portable mode. A: A couple of caveats to remember with online games: They often store the data they use as a login on an external server, and/or the data is encoded into the app itself (e.g. it encodes the password into the app itself, not in a file with the app). This means the password is no longer "stored in pidgin", but rather the application itself contains the password. This helps the app to "remember" passwords across multiple players. Portable apps are "untrusted", meaning that they don't have elevated trust, and can't be used like a "System app". When you run these apps under special debug/adventure situations, they typically try to talk to the internet, and the developer has not specifically taken care of this. This means that, if you run it in "portable" mode, it will search the entire drives for "config" files. This could be on other devices that the app isn't intended to run on, or on the device itself, causing a security issue, if your user has made a mistake. Based on that, a couple of things to try: Try running the app in a non-portable mode. This will only allow the app to access the necessary information for the game, without the ability to search the entire system for the config files. Try downloading an offline copy of the game from one of the player's devices, and accessing the configuration data stored on that device. That's all I can think of on the moment, but I am not a security expert, and any of this could be completely irrelevant. 1. Field of the Invention The present invention relates to a water
