PowerOff is an extremely lightweight application that monitors your power options and performs them with just a click. It allows you to have any of the common options you have set for your computer trigger when one of them is met. For example, you can set that your computer will logoff after a certain period of time, or hibernate when a certain memory usage is reached. Version History: Version 0.1.2 (2010/05/01): Version 0.1.1 (2010/04/06): - First public version (added timings, custom messages and image list update) - Python version updated to 2.6.2 and installed as a virtual environment - Resolved some design bugs - Application now uses a more intuitive interface Version 0.0.2 (2010/04/02): - New version numbering system - Updated the description - Added a main window with power options - Python version updated to 2.6.1 Version 0.0.1 (2010/03/30): - First public version Version 0.0.0 (2009/10/23): - Initial release Legal: - This application is an Open Source Project - You may not change or remove this copyright notice - You may not use this file for commercial purposes - You may not use this file for non-free purposes - This program is licensed under the GPL version 3 What's new: Version 0.1.2 (2010/05/01): - First public version (added timings, custom messages and image list update) - Python version updated to 2.6.2 and installed as a virtual environment - Resolved some design bugs - Application now uses a more intuitive interface Version 0.1.1 (2010/04/06): - First public version (added timings, custom messages and image list update) - Python version updated to 2.6.1 Version 0.0.2 (2010/04/02): - New version numbering system - Updated the description - Added a main window with power options - Python version updated to 2.6.1 Version 0.0.1 (2010/03/30): - First public version What's new: Version 0.1.2 (2010/05/01): - First public version (added timings, custom

What's New In Poweroff?

Say Hello to the all-new Windows 7 Experience Improvement Program, which has been designed to make your experience with Windows 7 even better than ever! The Windows 7 Experience Improvement Program is a free, new, and optional program for Windows 7 users that will help improve the performance and stability of Windows 7 by sharing information about your experience with Windows 7. It's easy and free for you to sign up for! "After many years of trying to get it right, we're really excited to offer this feature to Windows 7 users," said Kyle Kajewski, Senior Vice President of Windows Experience Program at Microsoft. "The Windows 7 Experience Improvement Program includes a suite of performance-improving tools that will help you improve your Windows 7 experience, while helping us to improve the quality of the product for the benefit of all our users." As part of this new feature, Windows 7 will offer tools to analyze and improve certain aspects of the performance and reliability of your system. These tools include: Visual performance and behavior analysis tools to help detect and diagnose performance problems. In the background of your PC, these tools will help provide an overview of how Windows 7 is performing on your system by monitoring the applications, services, hardware and Windows components running on your PC. You can use this information to decide which applications or services to close or restart to improve the performance of your PC. Performance and reliability analyzer and feedback tools to help identify, diagnose and resolve reliability problems and problems caused by poor performance. These tools will let you track information about your system from start to finish to see how Windows 7 is performing in different situations. Windows 7 Experience Improvement Program Tools are the same tools you have available in the Windows 7 Installation and Deployment Wizard. You can choose to install the tools that are included with your PC or you can use your own tools. The Windows 7 Experience Improvement Program includes the following tools. • Windows Firewall Analyzer: helps you to learn about and control firewall settings, events, and security settings. • Windows ReadyBoost Manager: allows you to monitor the drive that you selected as a ReadyBoost device. • Windows System Info: collects information about your hardware, software and Windows components. • Windows Diagnostics Tool: lets you check for and correct system problems that you may have missed with other tools. • Windows Troubleshooting Platform: provides direct access to Windows troubleshooting tools and results, saving you time and effort. • Windows Memory Diagnostic Tool: provides direct access to Windows tools and results for analyzing and diagnosing performance problems related to the memory. • Windows Hardware Diagnostic Tool: provides direct access to Windows tools and results for analyzing and diagnosing performance problems related to the hardware. You can find more information about the Windows 7 Experience Improvement Program at

System Requirements:

Windows: Processor: Intel Core i5 or equivalent (min. 4.0 GHz) Memory: 8 GB RAM Graphics: Intel HD 4000 or equivalent (min. 512 MB) Hard Disk: 25 GB available space DirectX: Version 9.0 Internet: Broadband Input Devices: Keyboard and Mouse Monitor: Full HD (1080p) recommended (1920x1080 or higher) Sound: DirectX 9.0 compatible Printer: Must be able to connect and use the printer via the
