Maintain copyright: Encrypt your.swf, It will prevent people from decompiling, reverse-engineering or taking a copy of your flash file. It comes with many features that will help you along the way. Simplified code: Optimize.swf file, Encrypt code (using one of a lot of predefined algorithms) and keep the memory footprint down. Customizable: Insecure encryption will help you encrypt your flash files and maintain copyright, but it won't protect you from memory freaks who could, for example, embed a movie with password in memory. Try to protect your flash files in a different way. If you want to protect your project, start encrypting your.swf, find a key, select one of the a lot of built-in algorithms, and save your code. Remember, you don't have to stop there. You can do more: * Change the string of key. * Change the string of algorithm. * Use special settings in code. * You can use Random Encryption or other method if the built in ones do not meet your needs. * Encrypt every single line of code. * Use custom preloader. * You can randomly generate key that can be more complex. For example, select the string of key, pass it to Random Encryption algorithm and generate new string of key from that. * You can make sequential numbering of lines. * Your project can be renamed and saved under different names. * You can specify the EXE file path and name. Installation: Unzip it and move it to any appropriate location. Prerequisites: Unzip it and move it to the appropriate location. * Windows 7, Windows Vista, Windows XP, Windows 2000, Windows NT, Windows Me, Windows 98, Windows 95 and Windows 2000 Server (x64). * Intel/AMD processor

SecureSWF is a piece of software that was especially designed for programmers who want to protect the source code for their.swf projects. With it you are able to obfuscate, encrypt and even optimize code. Easily protect your work secureSWF's goal is to make sure that no one is able to decompile your code or extract copyrighted material such as images, animations, audio and anything else that is embedded into the file. The application does so by encrypting the code and placing it into a loader which decrypts the source when content needs to be accessed. The created loader can be customized according to your specifications and can be set to protect the file from memory debuggers. User-friendly interface Seeing as how you've written a good chunk of code which you want to encrypt, it's safe to say that you have enough experience with computer software to be able to understand how to use secureSWF. Everything you need in order to create protected.swf is available from the main window of the application. Its tabbed structure makes it very easy for you to access and configure each step of the process. secureSWF comes with a very large number of encryption and optimization options and some of them might not make a lot of sense but the application provides a short description for every one. Multiple levels of protection which you can customize

Depending on how much you are willing to invest in protecting .swf projects, secureSWF offers a number of encryption presets which you can apply. You are able to choose between encryptions meant for basic testing or full-feature lockdowns. If for some reason none of the ones provided by secureSWF does the trick, you can manually set levels for statement randomization, control flow and integer data obfuscation, dynamic code wrapping, and much more. A powerful and practical tool With the above to consider and a lot more to discover in the details, it's safe to say that if you want to protect your hard work and render it inaccessible to decompilers, then you can give secureSWF a try. www.muva.net EmbedSoftware SecureSWF Description: SecureSWF is a piece of software that was especially designed for programmers who want to protect the source code for their .swf projects.
