For more help and support on Modo Sims, head over to SimLab web site. All our plugins are available to download at SimLab web site. You can get them here: Additional Information: If you run into any issues or have any problems with the plugin, don't hesitate to report them on the forums. I'm having issues with the xsi files just not finding the content where it is set. This is a problem with the modo version of DWF. If you go to the "Active Content" settings section in the exportation dialog, there is no 'local paths' or 'content' checkbox there. Simply select either 'Local' or 'Global' Please note: If you DO NOT have the problem as described in this thread, it is not related to the plugin. It is not related to the modo version of dwf exporter, and it is not related to the version of 3ds max you are using. It is related to the way the exportation dialog is created for the DWF plugin. I've looked over the modo version of dwf exporter code and

SimLab DWF Exporter For Modo

Model, session and project data is stored in a structure that is designed to be directly imported into Autodesk Revit. Features: Import 3D files (.dwf,.stl,.obj,.collada,.3ds.dxf) Exports both *.dwf and *.edw file formats Upload files to Google Drive Change and customize export settings The export dialog can be customized to match user's style Get notifications when new files are added to the folder Close Exported files directly from the folder Requirements: Modo 2016 onwards SimLab DWF Exporter for ModoQ: Elixir - accessing a value from the passed in pattern arguments I am having trouble with variables inside of a pattern definition. I need to be able to reference the value of the arguments that are passed, within the pattern, but I have only been able to get the same value from the pattern without using pattern matching. For example, I do not want to get "1" and "2" directly, but rather "value1" and "value2" since the pattern matching makes all the values different, and I need to use the same pattern elsewhere in the function. Example: defmodule Test do def f(a = 1, b = 2, c = 3) do a b c end def f(a = :value1, b = :value2, c = :value3) do "value1" "value2" "value3" end end So I want to call this function, and get: [1,2,3] [:value1, :value2, :value3] A: You don't need pattern matching here since you're doing tuple unpacking and you are still passing only one tuple to the function. defmodule Test do def f([a, b, c]) do [a, b, c] end def
