System Explorer is a simple tool that enables you to inspect and manage the system variables, resources and data. It can also show the registry as it would appear in the Windows Explorer. Portability perks System Explorer is a clean, simple and light app. This means that there is not much to look for or record in it. It is fast, as it uses a fairly low amount of resources and doesn't hog any of them. Interface and options The graphics are rather primitive and are similar to the ones you can find in different other programs. It's just that System Explorer has more of them at once and everything is compartmentalized into different categories for your convenience and better visibility of the information. There's also a help file that can help you understand and learn everything you need to know about this program. The interface is clear and rather simple to use. You can select the properties of the currently open window, or search for the system variables in the Registry. Most of the actions are performed through the main window, though there are a few functional buttons available on the main frame too. Explore the Registry The software utility utilizes two screens, one to display the programs in the Windows environment and one for the purpose of data. The data is organized into a grid to clearly see all the options, and it's possible to view every single part of the mentioned aspect, such as the name of each key, sub-key name, permissions, value, size and string type. Back in the early days of Windows, the registry was one of the prime causes of system crashes, but nowadays, the information is stored in an organized and safe format. It's not really necessary to modify any of the data in the registry, as the application provides a means of inspecting the needed information when the need arises. Find information in the Registry You can find all the information you need to work with the Registry in the main window. Since the values are sorted in different categories, you can easily find the key whose name you are looking for. You can save your work, change details, or get rid of the items that you don't need. System Explorer lets you select a specific value, and it displays all of the properties regarding that key. The application allows you to edit the main window to modify the different elements, like the size and position of the elements, as well as to see a preview before the changes take effect. You can also control the sorting method
