The World Clock 2008 shows the local time in 58 countries and the time in Washington, DC. There are also two clocks for USA - one for Eastern Time and the other for Pacific Time (on US west coast). The World Clock 2008 uses these two time zones depending on the location of the user. Use this time zone to manually set the current time in timezones around the world. Features: This application is useful when you're traveling and have to know the time in the different places you arrive. It will show the local time in different places. It can show also time in US and in Canada. HotKey Generator is an application to simulate keyboard keys and mouse movements. It simulates working of a keyboard key or mouse movement to simulate performing an action. For example, it simulates the act of pressing Ctrl + Tab combination to show the switch to another window. It works well with VCL applications like Delphi, Lazarus, C++Builder as well as with the Internet Explorer and other Windows applications. How it works: HotKey Generator is an application to simulate keyboard keys and mouse movements. It simulates working of a keyboard key or mouse movement to simulate performing an action. For example, it simulates the act of pressing Ctrl + Tab combination to show the switch to another window. It works well with VCL applications like Delphi, Lazarus, C++Builder as well as with the Internet Explorer and other Windows applications. How it works: In these instructions you will find how to change background theme and skin for TBrowser components. How to customize TBrowser components There are several approaches how to customize TBrowser components. Figure 1. The General tab of TBrowser control properties Figure 2. The File tab of TBrowser control properties Figure 3. The Handle tab of TBrowser control properties Figure 4. The Properties tab of TBrowser control properties Approach #1: Make one DLL. Create a new DLL project (Delphi or Lazarus) with the TBrowser component you want to customize. Add some new unit in that DLL. Write new function that enables and disables some components or modify some existing functions in this unit. Figure 5. The Supports property at General tab Figure 6. The Supports property at File tab Figure 7. The Supports property at Handle tab

System Requirements For World Clock 2008:

OS: Windows 7 SP1 (64-bit), Windows 8.1 (64-bit) or Windows 10 (64-bit). (Note: For Windows 7 and Windows 8/8.1, we recommend running at least Windows 7 SP1 and Windows 8/8.1 Pro. It may take a few minutes for the installer to load.) Processor: 2 GHz or faster (Note: Intel Core i3 or AMD equivalent) Memory: 1 GB RAM (4 GB for 64-bit) Hard disk space: 1 GB (4 GB
