Type your selection as a value, enter a value, enter your selection as a value, add the two values, subtract the two values, divide the two values, multiply the two values, or enter a numerical result for other mathematical operations. Example 1: KEYMACRO> 20+20+6 RESULT: 36 Example 2: KEYMACRO> 36-6 RESULT: 30 Features: - User-friendly and easy to use interface - Mounted canvas print is the result after the minimum trimmed canvas size and the minimum canvas wrap around the back of the bars have been determined - The results are very accurate and the program works even for small values - It does not have any hardcoded numbers or lengths, it works by reading the values from the keyboard - Can be easily exported as an image file and saved - You can add different products and keep track of all of them for different projects - Can be very useful for every printer and those that use EasyWrappe How it works: The minimum canvas size and the minimum canvas wrap around the back of the bars for your specific EasyWrappe project are determined by simply entering the dimensions of the stretched canvas. You can enter a value as the number of inches or centimeters or if you want to use another unit, you can select the option for the chosen unit of measurement. If you need to convert a value between units, you simply select the units you want the value to be in and the program will do the math for you. EasyWrappe Calculator can be used in conjunction with any third party EasyWrappe calculator. The app works in tandem with EasyWrappe's mathematical algorithm so the results of the calculator are verified by using EasyWrappe Calculator. To get started: - On the app's main screen, enter the required values for the stretched canvas. - You can specify a saved canvas size, for instance, if you are using one of EasyWrappe's ready-to-go canvas sizes, you can skip the step of specifying the values. - The screen will display the calculated values - If there is a problem, the program will inform you about it and ask you to correct the values. Limitations: The program does not support negative values but you can use the + and - keys to add and subtract from zero The program cannot handle very large values, use the Numeric key for that The program does 1d6a3396d6
