maximum packet size that can be sent over a link. Bandwidth is the maximum amount of data being sent over a link. Size is how much data a packet actually contains, usually it's one or more multiple of 512, in most ethernet applications it's a byte that says how much data is in the packet. MTU doesn't mean anything unless you need a layer-2 switch with something that pushes the packet out to ethernet media. Without a layer-2 switch, the size of the packet that
