Drawing on a computer screen is a two-step process. First, users begin with a 2D sketch and then complete it by drawing 3D objects. In AutoCAD, users enter geometry by typing commands. In AutoCAD LT, users must also draw line objects by typing commands. The geometric data created by drawing commands and commands to transfer that data to other drawings is saved. It is called a sketch. When a drawing is created, users draw objects using commands that have been created to handle geometric data. Users create blocks, dimensions, styles, and other objects to format geometry. Users change the look and feel of geometry by changing the colors of geometric objects and applying different materials and textures. The results of a design are displayed to the user in a drawing area. Users view design results by interacting with the drawing area and by viewing two or three perspectives simultaneously. The perspective appears when users select a
