IZotope Ozone Standard Full Version

iZotope Ozone provides you with 14 module presets. You can switch among them to create the final sound of the song. Create a signature sound with the Maximizer, the IRC Limiter, the Stereo Imaging, the Equalizer, the HEP (High Efficiency Processing) Utility and the Dither (dithering). The application can also be used as a mastering suite with tools like the Maximizer, the IRC Limiter and the EQ. The EQ is iZotope's own professional implementation of a classic EQ. You can configure 8 bands of bell curves, each of which features several parameters to modify the curves. You can apply the EQ directly on your tracks, using the Direct EQ function. You can also use the EQ to monitor the audio spectrum or use the RMS meter. The Maximizer is iZotope's very own sound sculpting technology, included in the application. It is meant to recover the dynamic presence of a track, even if it was cut and compressed in the mastering stage. You can manually adjust the Limiter gain, the Limiter's frequency and the Limiter's dampening. With iZotope's IRC channel limiter, you can monitor the audio signal to prevent any peaks that would overload your system. The iZotope IRC limiter offers a range of attack and release times and a compressor with graphic and panel views. The Stereo Imaging adjusts the stereo width of a track and the imaging refers to the sound of space, reflections and stereo location. It offers 7 stereo configurations: Standard, Extended, Room, Small Room, Large Room, Hall and Broad Stereo. The HEP utility is included in iZotope Ozone. It is used to automatically remove digital noise, correct audio peaks, reduce background noise and remove click and hum. The Dither (dithering) allows you to make use of different levels of quantization. It can take up to 24 or 16 bits and is meant to recover missing information. You can configure the levels of noise and quantization. Featuring the IRC limiter and Dither (dithering), you can monitor the audio signal and apply a limiter or a dither. The Maximizer, the IRC Limiter, the Dither (dithering) and the EQ module are included in the application. With this plugin, you can create your own signature sound by combining the Maximizer and the IRC Limiter
