The library exposes some structures to the outside world. namespace MyLibrary { public ref struct mystruct { // (MyStruct implementation) }; } I can access and use these in my app: namespace MyApp { using namespace MyLibrary; class App { private: void myfunction() { mystruct myStruct; // use mystruct } }; } If I wanted to import the structure into my C++/CLI library, what is the preferred way? I don't want to expose it in a COM API, because I don't need to. A: Export the internal struct from C++, not C#. You can do this with the #include directive.
